

ANDRADE CHRIS DECIERDO

FULL STACK ENGINEER

+64 204 0265 304 | andradechrisdecierto@gmail.com | Auckland, New Zealand | [Portfolio](#) | [Github](#) | [Linkedin](#)

PROFESSIONAL SUMMARY

Results-driven Full Stack Software Engineer with 8 years of experience building and maintaining scalable, high-performance web applications in the SaaS industry. Expertise in modern frontend and backend technologies, delivering secure and maintainable solutions for clients across Japan, the USA, and New Zealand. Demonstrated ability to lead feature development, optimize system performance, and contribute across the full software development lifecycle.

TECHNICAL SKILLS

Frontend: React, Redux, Angular, Javascript, Typescript, HTML & CSS, SCSS, JQuery, Tailwind, Bootstrap, Material UI
Backend: Node, NestJs, Express, Laravel, Javascript, Typescript, PHP, GraphQL, Restful API, Code Igniter
Databases: MySQL, Postgres, MongoDB
DevOps: Git, Docker, Kubernetes, Jira, Bitbucket, Github, Phabricator
Others: Unit testing, Jest, Postman, Agile Development, Scrum, Kanban, Linux, Microservices

CAREER HISTORY

FULL STACK ENGINEER - [XTRACTA](#)

Auckland, New Zealand
February 2025 – Present

Provides AI-powered data extraction software and OCR solutions to help organization with all kinds of document automation.

Technologies: React, NestJs, Typescript, GraphQL, Restful API, MySQL, Docker, PHP, Code Igniter, Microservices, Bitbucket

- Rapidly adapted to and resolved issues in legacy codebases, reducing debugging time while maintaining strict adherence to coding standards and best practices
- Proactively refactored legacy code, improving maintainability and application performance by 25%, and created comprehensive documentation to enhance team collaboration and onboarding.
- Support migration efforts to modern stacks like React and Node.js, contributing to both frontend and backend tasks, accelerating feature delivery by 30%
- Optimized complex MySQL queries using advanced techniques such as table joins, indexing, and subqueries, to handle high-volume transactions across thousands of records, significantly reducing loading times and improving database performance by up to 50%

FULL STACK ENGINEER - [TRACTION](#)

Indiana, USA (Remote)
July 2020 – May 2023

A farm management solution software built for the cloud which integrates actual accounting numbers with field operations.

Technologies: Angular, Node, Typescript, GraphQL, Postgres, Docker, Tailwind, Material UI, S3, Bitbucket, Leaflet, OOP, SOLID

- Developed a pivotal feature instrumental in financial analysis by creating an advanced algorithm that computes the company's retained earnings and accrual net income
- Designed and integrated a comprehensive page capable of generating critical accounting reports such as the accrual balance sheet and its supporting schedule

- Enhanced the user experience by creating an innovative feature utilizing Javascript interactive map library (leaflet). This enhancement allows users in agronomy operations to create resizable, rotatable, and draggable grids on a multipolygon layer, with precision markers at grid centers, resulting in a more than 80% increase in operational efficiency for soil sampling
- Built the core functions of the agronomy module that let you create field boundaries through leaflet or upload a shapefile which will be saved as geojson in the database. This results in at least 50% reduction in data processing time
- Demonstrated exceptional versatility by actively participating in the entire software development lifecycle. Contributed significantly to sprint planning, design processes, unit testing, code reviewing, and presenting of sprint progress to the client

FULL STACK ENGINEER - [CM STUDIO](#)

Tokyo, Japan (Remote)

April 2016 – July 2020

A cloud video generation service that allows you to create and edit videos used for advertisements.

Technologies: React, Redux, Laravel, Node, Javascript, PHP, MySQL, Docker, Kubernetes, Bootstrap, S3, Phabricator, Restful API

- Programmed a user-centric assistant feature designed to streamline the video template selection process based on user-provided information and purpose, leading to a reduced user time spent on template selection
- Improved database tables through strategic refactoring, enhancing structure and optimizing associations, resulting in an estimated 25% increase in query performance and a more scalable database design
- Pioneered the development of the application's core feature, enabling seamless creation and editing of videos with the incorporation of text, video clips, photos, and background music
- Introduced process improvements and implemented design patterns and coding standards, resulting in a more organized, clean, and maintainable codebase. These enhancements optimized development efficiency and reduced technical debt
- Demonstrated leadership by guiding a team and mentoring junior engineers, fostering skill enhancement through coaching and guidance in various tasks
- Ensured quality output by conducting code reviews and comprehensive functional testing, maintaining a high standard of code reliability and performance. These efforts contributed to at least 20% reduction in post-deployment defects

EDUCATION

Bachelor of Science in Information Technology

Silliman University, Philippines

Graduated 2015

AWARDS AND RECOGNITIONS
